Training Solutions

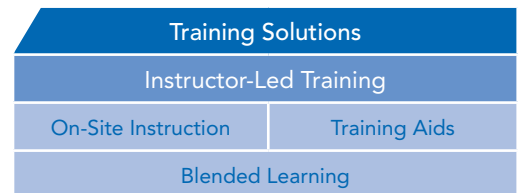

Instructor-Led Training

“EM-Assist’s on-site instruction and reference materials demonstrated not only their expert knowledge of the specific tasks on which they were training our personnel, but also a thorough understanding of how such tasks supported the base’s broader mission. Their tiered approach to training maximized return-on-investment, minimized workers’ time away from their tasks, and greatly improved performance.”

– Environmental Compliance Program Manager (U.S. Air Force)

EM-Assist’s instructor-led training services provide cost-effective classroom training across a wide range of subjects. We offer interactive on-site instruction, support services, and multimedia training aids to facilitate effective classroom learning. Our expert instructional designers are well-versed in adult learning theory and are adept at customizing content across media to transcend the passive classroom experience. By creating interactive learning experiences that keep students interested and engaged, we enhance students’ knowledge retention and improve clients’ return on investment in classroom training. Multimedia training aids connect instructors and students by facilitating active participation using realistic examples and pertinent case studies. Our training support materials include student and instructor guides, as well as a range of traditional and interactive media. We provide highly qualified project-based, part-time, and full-time on-site instructors with subject matter expertise and a strong command of today’s classroom training environment. Additionally, we offer professional “train-the-trainer” services and custom seminars with pre- and post-seminar support.

Our instructor-led training can be integrated with custom eLearning courseware to provide a cost-effective blended learning solution that is appealing to students with a variety of learning styles.

- › We delivered a **blended learning** solution to a Marine Corps client by effectively integrating **on-site instruction** with computer- and print-based **training aids**; our subject matter experts, deployed as full-time client-site instructors, ensured that all materials were effectively incorporated into the classroom environment to provide the optimum learning experience.
- › As a **training aid**, we created a user guide for an Air Force data management system and provided **on-site instruction** to users of the system; user groups receiving our training generated fewer help desk calls and reported a 35% reduction in inventory error rates.
- › In support of a project for the State of California, we created a **blended learning** solution that integrated our custom eLearning courses with **on-site instruction**, resulting in cost-effective training that reached a broad public audience and achieved our client’s strategic objective of educating and empowering communities in the management of their local resources.
- › Our sophisticated **training aids** and innovative instructional design allowed us to reduce what had been a four-day classroom course into a three-day course, saving our Marine Corps client money by reducing student training time without compromising training effectiveness.
